# Getting to know your parish

#### What is this spotlight?

This short spotlight brings together a range of information about your parish, both in terms of your congregations, but also the wider community living in your area. It covers areas such as Christian affiliation, population age and ethnicity profiles, household structures, deprivation, employment, schools and qualifications, alongside church statistics such as attendance and giving.

#### How should I use it?

This spotlight is not an end in itself, but rather a starting place for you to explore further. You may want to discuss it at a PCC meeting or with leadership teams. We've included some questions on each page to help you to think about the information, however some things will be of more relevance in some areas than others, and these are just suggestions to get you started. We've also included some bigger questions about what to do next at the end of the spotlight on page 17. There's space for you to write some notes here. It might be helpful to write a short paragraph to summarise your community profile or note down anything that has struck you as particularly important. There are also details at the end for where you can find further information should you want to dig a little deeper.

#### Questions

There is information at the end of the spotlight about where this data comes from and how it was calculated. If you have any further queries then please do contact the Research and Statistics team at statistics.unit@churchofengland.org

#### Contents

1. Summary: a brief overview of your parish, including what look to be 5 of the most pressing social issues in your area

2. Age: age profile of your community

3. Ethnicity: ethnicity profile of your community

4. Integration: English language speaking and length of UK residency in your community

5. Religious affiliation: religious affiliation in your community

6. Households: families, dependents, one person households, temporary residents and housing tenure

7. Marital and civil partnership status

8. Employment: occupations, benefits and mobility in your community

- 9. Education: CofE schools and qualification levels in your community
- 10. Health: people with health problems and carers in your community
- 11. Deprivation: different types of deprivation in your community

The **National Statistics Socio-economic Classification (NS-SeC)** is an occupationally based classification but has rules to provide coverage of the whole adult population. The NS-SeC provides an indication of socio-economic position based on occupation. It is an Office for National Statistics standard classification. To assign a person aged 16 to 74 to an NS-SeC category their occupation title is combined with information about their employment status, whether they are employed or self-employed and whether or not they supervise other employees. Full-time students are recorded in the' full-time students' category regardless of whether they are economically active or not.

DEPRIVATION AND KEY ISSUES AFFECTING PARISHIONERS

It is important to note that these statistics are a measure of deprivation, not affluence, and to recognise that not every person in a highly deprived area will themselves be deprived. Equally, there will be some deprived people living in the least deprived areas.

Deprivation covers a broad range of issues and refers to unmet needs caused by a lack of resources of all kinds, not just financial. The English Indices of Deprivation attempt to measure a broader concept of multiple deprivation, made up of several distinct dimensions, or domains, of deprivation. Seven domains of deprivation are combined to produce the overall Index of Multiple Deprivation. Each domain contains a number of component indicators. The English Indices of Deprivation are a continuous measure of relative deprivation therefore there is no definitive point on the scale below which areas are considered to be deprived and above which they are not. Deprived areas have been defined in this release as those containing LSOAs that are amongst the 10 per cent most deprived in England according to the overall Index of Multiple Deprivation.

	Average			Number of LSOAs amongst most deprived*			Number of LSOAs amongst least deprived*

What are the particular issues that affect your parish? Are you doing anything to address these?

#### What to do next?

This spotlight has given you some information about your parish both in terms of your own church congregations and your local community. This is not an end in itself, but rather a starting place for you to explore further. Questions to consider might include:

• What does our congregation look like?

• How does it compare to the local population?

• What other churches are there in the area? What parts of the community do they reach? Which parts of the community are being missed?

• What other local organisations or centres are there, that might bring people into our parish? Examples might be Hospitals or health centres, prisons, job centres, homeless shelters, schools, charities, mother and toddler groups, uniformed organisations, community centres, libraries, shops, offices, stations? How can we interact with these people?

• What areas of our parish do we know well or less well?

• How does the local community change between weekdays and weekends? How do our services and events fit with the shifting local population?

• Is our website/'A Church Near You' profile up to date?

• Are our records up to date?

**Statistics** 

OF FNGLAND

#### ABOUT THIS DATA

 Annual parochial returns These have been collected annually between 2007 and 2011 by the Research and Statistics team, Archbishops' Council
 ONS Census data 2011

Estimated using OA level data sourced from ONS Census Data 2011, ONS

3 ONS Census data 2001

Estimated using OA level data sourced from ONS Census Data 2001, ONS

4 2007 Church Diversity Survey

http://www.churchofengland.org/about-us/facts-stats/research-statistics/clergydiversityaudit2005linkpage.aspx

5 DWP

#### Proportion of the population aged 60+ who are in receipt of the Guaranteed part of Pension Credit (August 2012)

Estimated using LSOA level data sourced from http://83.244.183.180/NESS/BEN/iben.htm

#### Proportion of the working age population who are in receipt of a key out-of-work benefit (Q3 2012)

Estimated using OA level data from DWP Information, Governance and Security Directorate from http://statistics.dwp.gov.uk/asd/asd1/tabtools/census\_output\_area\_data/index.php?page=census\_output\_area\_data

6 ONS

Life Expectancy at birth (boys) (1999-2003) Estimated using ward level data from ONS. Life expectancy at birth (girls) (1999-2003) Estimated using ward level data from ONS.

7 HMRC

#### Percentage of Children under 16 in Poverty (2009)

Estimated using LSOA level data from http://www.hmrc.gov.uk/statistics/child-poverty-stats.htm

## 8 Department for Communities and Local Government

#### IMD (2010)

Estimated using LSOA level data from Communities and Local Government, 2010.

https://www.gov.uk/government/uploads/system/uploads/attachment\_data/file/6320/1870718.pdf

## When analysing data, it is important to consider that some parishes are very small and proportions may be very large even where very few cases meet the criteria.

#### When quoting figures derived from this data, care should be taken with the level of accuracy quoted.

**Methodology:** Government data is published on government boundaries that do not match ecclesiastical boundaries. In order to produce parish population and demographic estimates we have worked with the ONS to use a best fit modelling process. As such, these statistics can only be considered estimates and, particularly in very diverse areas, are best used in the context of local knowledge. Where parish populations are sparse the figures for government areas overlapping the parish are used.

Parish estimates from the census have been calculated using the census output area data published by the ONS. These are provisional estimates, and when more granular data at postcode level is available, will be revised. Estimates have been modelled by allocating the population weighted centroid of each output area to the parish within which it falls. This means that some parishes have not been allocated population, however proportions for demographic variables have been calculated based on the output areas overlaying the parish.

For further information about this process. **please contact statistics.unit@churchofengland.org**.
